Continuation of Substance of Interview including description of the general nature of what was discussed: During a telephone conversation with Joel Skinner, the Examiner informed Mr. Skinner that there was not proper antecedent basis for "the stationary member" and "the rotatable member" in claim 1. Also the Examiner informed Mr. Skinner that it was unclear as to how "the central aperture contacts, compresses, and crimps the stent". Mr. Skinner agreed to provide proper antecedent basis for the stationary and rotatable members, as well change "central aperture" to - - segment distal ends- - in order to clearly identify the member which performs the associated function. All of these changes were agreed to be performed by an examiner's amendment.
